

Veterinary Prescription

Pet Name: Tinku
Pet Number: PET-1762356960175-709
Disease: Hip dysplasia

Prescription Schedule

Date	Time	Medicine	Dosage	Route	Duration	Notes
2025-11-05	08:00	Carprofen	4.4 mg/kg	oral	14 days	Administer with food to minimize gastrointestinal upset. Monitor for vomiting, diarrhea, or decreased appetite. Adjust dose based on response. AI-generated; immediate vet consultation required.
2025-11-05	14:00	Gabapentin	10 mg/kg	oral	14 days	Administer to help manage chronic pain associated with hip dysplasia. Monitor for sedation. May be given with or without food. AI-generated; immediate vet consultation required.
2025-11-05	20:00	Adequan Canine (Polysulfated Glycosaminoglycan)	5 mg/kg	injectable (IM)	Loading dose: twice weekly for up to 4 weeks, then monthly	Administer intramuscularly. PSGAG helps to improve joint lubrication and reduce inflammation. Monitor for injection site reactions. AI-generated; immediate vet consultation required.
2025-11-05	Daily	Omega-3 Fatty Acids (EPA/DHA)	Dosage varies based on EPA/DHA concentration in the supplement; follow label instructions for a dog of Tinku's weight	oral	Ongoing	Administer with food. Omega-3 fatty acids possess anti-inflammatory properties beneficial for joint health. Monitor for any signs of gastrointestinal upset. AI-generated; immediate vet consultation required.

Diet & Recovery Plan

Date	Feeding Time	Food Type	Quantity	Notes
2025-11-05	morning	Joint Support Diet	Approximately 300g, adjust based on activity and body condition score	Hill's Prescription Diet j/d or Royal Canin Veterinary Diet Mobility are formulated with glucosamine, chondroitin, and omega-3 fatty acids to support joint health. AI-generated; immediate vet consultation required.
2025-11-05	evening	Joint Support Diet	Approximately 300g, adjust based on activity and body condition score	Feeding a diet rich in omega-3 fatty acids will help reduce inflammation and improve mobility. AI-generated; immediate vet consultation required.
2025-11-05	Daily	Weight Management Formula (if overweight)	Adjust based on target weight and feeding guidelines on the food label.	Maintaining a healthy weight is crucial for minimizing stress on the joints. If Tinku is overweight, a weight management diet is recommended to reach and maintain an ideal body condition. AI-generated; immediate vet consultation required.
2025-11-05	Throughout the day	Limited Ingredient Treats (if giving treats)	Small amounts, accounting for total daily caloric intake	Choose low-calorie, limited ingredient treats to prevent weight gain and minimize potential allergic reactions. Consider treats containing glucosamine and chondroitin. AI-generated; immediate vet consultation required.

Owner-Friendly Explanation

This treatment plan aims to alleviate pain and inflammation associated with hip dysplasia, while supporting joint health and maintaining optimal body weight. Carprofen is an NSAID for pain relief, Gabapentin for chronic pain, and Adequan to improve joint lubrication. A joint support diet provides necessary nutrients. AI-generated; immediate vet consultation required.
