

# Veterinary Prescription

**Pet Name:** Unnamed  
**Pet Number:** PET-1761455389483-275  
**Disease:** Canine influenza

## Prescription Schedule

Date	Time	Medicine	Dosage	Route	Duration	Notes
2025-10-26	08:00	Doxycycline	5-10 mg/kg	oral	7-10 days	Prevent secondary bacterial infections
2025-10-26	14:00	Meloxicam	0.1 mg/kg	oral	3-5 days	Reduce fever and inflammation
2025-10-26	20:00	Nebulization with saline	As needed	inhalation	Daily until symptoms improve	Humidify airways for easier breathing

## Diet & Recovery Plan

Date	Feeding Time	Food Type	Quantity	Notes
2025-10-26	08:00	Soft canned food	100 g	Easy to swallow with respiratory symptoms
2025-10-26	14:00	Boiled chicken broth	75 ml	Supports hydration and nutrients
2025-10-26	20:00	Rice porridge	50 g	Gentle on the throat and digestive system

## Owner-Friendly Explanation

Canine Influenza is a contagious respiratory virus causing flu-like symptoms. Antibiotics prevent secondary infections, anti-inflammatories ease fever and pain, and nebulization helps clear airways. Soft, warm foods support recovery without irritating the throat. Isolate your pet to prevent spread and consult a vet for monitoring.
